

# Wobblers

---

RGH have developed a range of wobblers that allows our customers to have complete flexibility over a number of key characteristics:

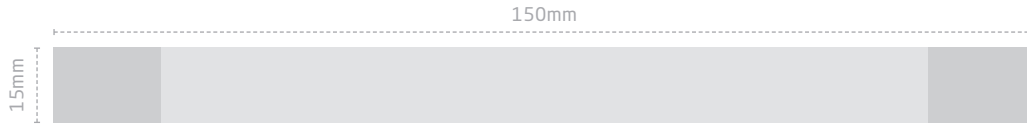

- Thickness of plastic - The standard thickness that is used to manufacture wobblers is 240 micron but should you wish to hang heavier products or advertising from the wobblers then the thickness can be increased to accommodate this
- Length and shape - RGH have a wide range of tooling available which means that if you wish to increase or decrease the width or length of the wobbler then this is no problem to achieve.
- Format - Wobblers are generally supplied individually cut and packed loosely in bags but RGH have designed a way of presenting them on sheets which dramatically reduces application time and also saves space when packing.
- Adhesive - High tack foam, rubber and crystal clear adhesives are available on either side of the wobbler. Adhesive can also be applied to alternative sides to suit your application needs.

and bespoke solutions, visit: [www.rghpos.com](http://www.rghpos.com)

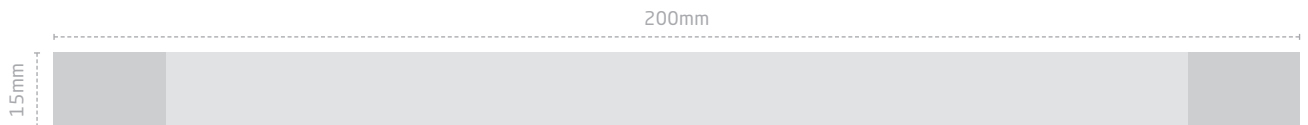

# Shapes & Sizes available

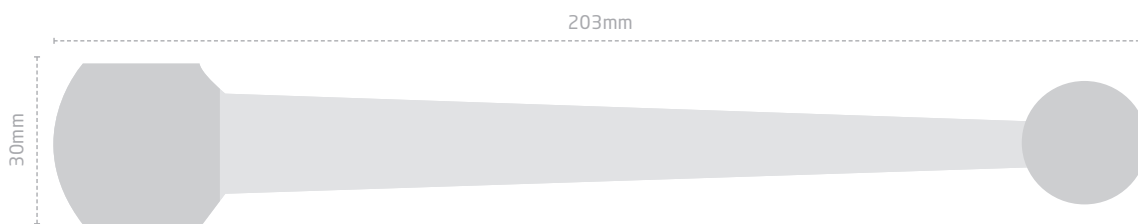

## R150-15: Straight wobbler

Length: 150mm  
Width: 15mm  
Material thickness: 240 Micron  
Adhesive type: High Tack Rubber, foam or clear adhesive  
Adhesive area: 18mm x 15mm

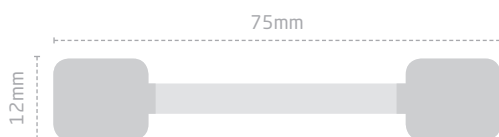

## R200-15: Straight wobbler

Length: 200mm  
Width: 15mm  
Material thickness: 240 Micron  
Adhesive type: High Tack Rubber, foam or clear adhesive  
Adhesive area: 18mm x 15mm

## R203-35: Shaped wobbler

Length: 203mm  
Width: 30mm  
Material thickness: 240 Micron  
Adhesive type: High Tack Rubber, foam or clear adhesive  
Adhesive area: 30mm x 30mm and 20mm diameter

## R75-12: Paddle end wobbler

Length: 75mm  
Width: 12mm  
Material thickness: 200 Micron  
Adhesive type: High Tack Rubber  
Adhesive area: 15mm x 12mm
